TriLastin System 2 for Cellulite – Smooth Out Dimpled Skin Quickly

The [TriLastin System 2](#) for cellulite is a cellulite treatment program designed by EC Research, who is already famous for their top rated stretch mark removal products. The cellulite program is a two step system consisting of the use of TriLastin-HT and TriLastin-CF.

Ingredients

TriLastin cellulite program contains two main products that help to eradicate the cellulite. Both of these products are vitamin rich, and are packed with ingredients that are not only good for the skin, but the body as well. The two main products include:

TriLastin- HT

This is a hydrothermal accelerator that prepares the skin for treatment. It is in charge of opening the pores of the body, and allows the skin to absorb things more rapidly.

TriLastin- CF

This is the product that is in charge of firming the skin, and metabolizing the fat so that the cellulite can be erased. This product consists of two unique ingredients. LipoTrisome is a combination of three fat burning ingredients that combine to metabolize fat using the body's natural methods. SDDS is the second major component of the TriLastin- CF product, and it is responsible for creating a skin patch that is in charge of releasing the other ingredients in the formula at key times.

Advantages

Since the [TriLastin System 2](#) for Cellulite has both an accelerator and a firming component, it is much more effective at allowing the body to absorb and utilize the product. This creates more dramatic and powerful results in a shorter amount of time than other creams and system treatments.

TriLastin has been tested in clinical trials and case studies, and has been shown to be more than 90% effective at reducing cellulite. Not only does the TriLastin formula cure cellulite, but it lifts and firms the skin to bring back its original youthful appearance as well.

Disadvantages

TriLastin System 2 for Cellulite is a two part system, and because of this it is a little more costly than other treatment creams. It also takes a little longer to produce results than more dramatic removal methods. While other treatments can produce results immediately or within a week or two, TriLastin can take up to four weeks for noticeable results.

Cost

The TriLastin System 2 for Cellulite is available for a cost of \$79.95, and is a month's supply of the product. If you compare this system to other kinds of cellulite treatments it is much cheaper. However, there are also systems that are less expensive and may produce similar results. If you only need the treatment for a month or two then it could be a good value, but if you are in need of recurring treatments, then other options may be less expensive.

Who Would Benefit From This Product

The product would best benefit someone who needs the extra power of an absorbing agent as well as a firming and metabolizing product. In other words, if you have light to severe cellulite, and think that you would benefit from a two part treatment than this formula would work well for you. The TriLastin System 2 for Cellulite would also work well for someone who is looking to save money over other methods, and is willing to wait a little longer for results.
